

Displays

Digital printing has revolutionized the world of colour printing. Formerly, any colour print such as posters needed a minimum number of copies in order to be cost efficient.

Nowadays colour posters can be printed starting at a number of copies as low as one. Together with another revolution in printing *material* (e.g. washable textile), the world of mobile display stands has made a great leap towards becoming affordable and durable as never before.

So far we have produced some 150 mobile exhibition stands using this new digital technology. For more details see [Mobile Exhibitions](#)
